

♥ SHARING IS CARING

♥ LET'S SHARE

LET'S WORK OUT ALL THESE PROBLEMS THAT INVOLVE BEING KIND AND SHARING (NO CALCULATORS ALLOWED!)

Tumi and Mike celebrate their birthdays on the same day.

Together they decide to treat

their classmates to a sweet from the tuck-shop. There are 28 other learners in their class.

They each have R10 to spend and the sucker they have chosen costs 65c.

How much do each of them have to spend if each learner in their class gets a sucker?

Liam works at a dog rescue centre every Saturday morning. He always gives each dog two dog biscuits when he gets there.

He has visited the centre for 15 weeks in a row.

The first 5 weeks there were 23 dogs. Homes were found for two of them so there were only 21 dogs for two weeks.

After that the numbers increased by 2 dogs each week.

How many dog biscuits did Liam take to the rescue centre in 15 weeks?

STOP, SCAN & STUDY!

Mrs Patel has 16 black Koki pens and 15 red Koki pens. Five black pens have dried up and 12 red pens have no lids. She has to place a black lid on the remaining red pens so that they don't leak.

She has 22 learners in her class and every one must get a pen.

How many learners will get a red pen with a black lid?
